

Movie Database

1. Description

Simple website that allows browsing / searching movie database provided by <http://www.omdbapi.com/>. Only logged in users are capable to use this feature (standard login or Facebook/Google). API results should be viewable on a website with basic layout, with pagination and a possibility to save favourites into local database.

2. Technologies

Any. Whatever would be best in your opinion (including JS frameworks).

3. Requirements

Entire project should be available as an open source project on GitHub. Please commit your work on a regular basis (rather than one huge commit). The project should contain README file with information how to install application in local environment.

4. Deploy

Please use Docker for orchestration (docker-compose).

In case of any questions, use your best judgement.
